EDUCATION

K S Institute of Technology

Bachelor of Engineering in Computer Science and Engineering — CGPA: 8.96

2022 – 2026

Bangalore, India

EXPERIENCE

Associate Software Engineer

Mphasis

Aug 2026 – Present

Bangalore, India

Software Development Intern

Mphasis

Feb 2026 – May 2026

Bangalore, India

- Developed Java-based backend systems using JDBC, Hibernate, and DAO architecture.
- Built RESTful applications using Spring, Spring MVC, and Spring Boot.
- Worked with JSP, JSTL, custom tags, events, and listeners for dynamic web modules.

PROJECTS

PiSentinel | Linux, Raspberry Pi, Cowrie, Python, Bash, SSH, Nmap

2026

- Built and configured a Raspberry Pi-based cybersecurity honeypot using Cowrie to capture and analyze SSH attack activity.
- Investigated SSH authentication attempts, attacker commands, sessions, and filesystem interaction within an isolated honeypot environment.
- Customized the honeypot filesystem and Linux environment to simulate a realistic target system.
- Automated security monitoring and system administration tasks using Python and Bash scripting.

Vulnerability Assessment & Penetration Testing Lab | Kali Linux, Metasploitable, Nmap, Nessus

2026

- Performed network reconnaissance and service enumeration against intentionally vulnerable lab environments using Nmap.
- Conducted vulnerability assessment using Nessus and analyzed identified services and potential security risks.
- Executed payloads against Metasploitable and established TCP and HTTP reverse shell sessions, practicing exploitation and post-exploitation analysis in a controlled environment.

A.I.D | HTML, Javascript, MySQL, AWS, JWT, Authentication

[GitHub]

2024

- Developed a cloud-based medical history management system enabling secure storage and access of 100+ records.
- Implemented JWT-based authentication and password hashing, with secure database query handling to mitigate SQL injection risks.
- Integrated AWS RDS for structured data management and AWS S3 for image storage.

Home Server | Linux, Raspberry Pi, Samba, Tailscale, SSH, Networking

[GitHub]

2025

- Built and administered a Linux-based Raspberry Pi home server for remote file storage and media services.
- Configured Samba for network file sharing and managed Linux users, permissions, services, and storage.
- Implemented Tailscale and SSH for secure remote access, system administration, configuration, and troubleshooting.

TECHNICAL SKILLS

Cybersecurity: Vulnerability Assessment, Network Reconnaissance, Service Enumeration, Exploitation, Reverse Shells, Authentication, Linux Security, Security Hardening

Security Tools: Kali Linux, Nmap, Nessus, Metasploitable, Cowrie, SSH, Tailscale

Systems & Networking: Linux, TCP/IP, DNS, HTTP/HTTPS, VPNs, Routing, Firewalls, Samba

Programming: Bash, Python, Java, SQL, C

Web & Cloud: AWS, Spring MVC Flask, MySQL

Development Tools: Git, Vim, IntelliJ IDEA, VS Code, SQL Workbench

CERTIFICATIONS & LANGUAGES

Certifications: CompTIA A+, Deloitte Cyber Security Certification

Languages: English, Kannada, Hindi, German
